Hello This is a SMALL GIFT For your dedication to Teaching FF!

All You gotta do is Do the Following Things and you're good to go,

```
=============================================
======INSTRUCTIONS=FOR=1ST=TIME=USE======
=============================================
```

====Windows And MacOS====

Step 1.
Open The Python Installer included.
Install it. Complete the Setup Normally No Problem.
BUT AS SOON AS IT FINSHES THERE WILL BE A CHECKBOX TO ADD TO "PATH". YOU HAVE TO ENABLE IT.
If you forget it no problem just restart the installer but without it it wont work.

Step 2. WINDOWS
Now Run The "Install_dependencies file" in
windows folder.
It will ask to run as admin, allow it.
After its complete the installation is complete.

Step 2. MacOS
Open Terminal
In the Terminal window, type cd (that's cd followed by a space).
Then, drag and drop your project folder (the one with install_dependencies.sh having a name like MACOS INSTALL) directly into the Terminal window. This will automatically paste the full path.
and then press Enter.

In the Terminal, type the following command and press Enter:

chmod +x install_dependencies.sh

This command gives the script permission to run.

In the Terminal, type the following command and press Enter:

./install_dependencies.sh

Follow the on-screen instructions. The script will guide you through checking for Python 3 and installing packages.
Once the install_dependencies.sh script completes successfully, you can run your main script.

HAVE FUN. Love From Malik Muhamed Ali xxx!
